

Ultrasonic Atomization Module – MS-10 Technical Datasheet

1. General Description

The MS-10 a Ten-Head ultrasonic atomization module designed for high-capacity industrial systems requiring continuous mist generation.

2. Technical Specifications

Working Voltage: DC 45V (42–48V)

Working Current: 5.4 – 5.8 A

Frequency: 1.7 MHz

Continuous Output: 5.0 – 6.0 L/H

Droplet Size: 1 – 10 μm

Working Water Temperature: 5 – 45°C

Recommended pH Range: 5 – 8

Optimum Water Level: 28 – 33 mm

Protection Water Level: 10 – 15 mm

Overheat Protection: 55 – 65°C

Lifetime (Clean Water): 3500 – 5000 hours

3. Mechanical Specifications

Housing Material: polished 304 stainless steel housing

Nickel-chrome plated brass compression ring

Atomizing Disc Diameter: $\text{Ø}20 \text{ mm} \times 10$

Dimensions: 279 x 85 x 28 mm

Cable Length: 1500 mm

4. Power Supply

Recommended to use AC220V-DC45V / 350W power supply.

5. Features

- High-frequency ultrasonic atomization (1.7 MHz)
- Compact design for OEM integration
- Built-in over-temperature protection
- Water level protection (dry-run prevention)
- Stable constant current operation
- Stainless steel housing for durability

6. Application Areas

- Humidification systems
- HVAC integration
- Industrial misting
- Agricultural / greenhouse use

- OEM equipment integration

7. Important Notes

- Designed primarily for clean water operation
- Recommended pH range: 5–8
- For special liquids (e.g. disinfectants, HOCl solutions), compatibility and lifetime should be verified through testing
- Service life may vary depending on water quality and operating conditions

8. Testing & Evaluation

Samples are available for testing and evaluation upon request.
